

Chemsorb® I321

High-grade impregnated activated carbon for removal of airborne mercury vapour

Description

Chemsorb® I321 is specifically designed as a high-grade impregnated activated carbon for use in critical filtration applications such as breathing air respirators. The proprietary reagent used to impregnate this high activity coconut shell carbon has shown superior results for the adsorption of airborne mercury vapour. Chemsorb® I321 is virtually dust-free, ammonia-free, and contains no heavy metals such as copper, lead, mercury, nickel or chromium.
